

System Configuration Requirements for HKTR

1. Recommended System Configuration of HKTR for SWIFTNet

HKTR is certified to run on SWIFTNet using the following below operating systems, browser versions as well as SWIFT components. Relevant technical support may not be provided to members who adopt system configurations other than those listed below.

1.1 Operating System and browser

Microsoft Windows and Internet Explorer (IE) version:	(a) Windows 7 Professional – 32bit and IE11 (b) Windows 7 Professional – 64bit and IE11 (c) Windows 8.1– 32 bit and IE11 (d) Windows 8.1– 64 bit and IE11 Latest IE patch level recommended.
---	--

1.2 SWIFT Related

WebAccess version:	(a) 7.0.40 (b) 7.0.50 (c) 7.0.55
JAVA version:	(a) Java 6 (Update 27 or Update 151) (b) Java 7 (Update 7 and up to Update 141) (c) Java 8 (Base and up to Update 131) Note: SWIFT only supports 32 bit versions of the JRE
Digital certificate:	Digital certificate issued by SWIFT

Members should contact SWIFT at 2107 8777 for further details on the above software products to ensure that their SWIFTNet connection and infrastructure, such as SWP, SAG, firewalls etc., are in place.

2. Recommended System Configuration of HKTR for Internet

HKTR is certified to run on Internet using the following operating systems and browser versions. Relevant technical support will not be provided to members who adopt system configurations other than those listed below.

Microsoft Windows and Internet Explorer (IE) version:	(a) Windows 7 Professional SP1 – 32bit and IE11 (b) Windows 7 Professional SP1 – 64bit and IE11 (c) Windows 8.1– 32bit and IE11 (d) Windows 8.1– 64bit and IE11 Latest IE patch level recommended.
Digital certificate:	Digital certificate issued by the following authorized issuers: (a) Local Certification Authority: (i) Digi-Sign Certification Services Limited (“Digi-Sign”) website: http://www.dg-sign.com ; (ii) Hongkong Post Website: http://www.hongkongpost.com ; (b) Global Certification Authority: (i) Geotrust Website: http://www.geotrust.com ; (ii) VeriSign ¹ Website: http://www.verisign.com ; (iii) Symantec Website: http://www.symantec.com ; (iv) Entrust (new) Website: https://www.entrust.com ; (v) IdenTrust (new) Website: http://www.identrust.com ; <small>¹ Security Business of VeriSign has been acquired by Symantec in 2010.</small>

Despite that HKICL has implemented multiple levels of security control on access from the internet (including firewalls, application access authentication), internet connectivity may have security implications on members’ networks and computers. While members can access the HKTR using any internet access technology and any Internet Service Provider (ISP), the following basic levels of security for access to the HKTR via the internet should be attained:

- Strong firewalls are implemented
- Systems are screened with virus protection software
- Systems are screened with anti-spyware software
- End to end encryption of data between the client and server using SSL
- Comprehensive password policies

~~ END ~~
